LOCAL AI · FOOD LABELS

Label Truth Finder turns a food label into a clearer explanation

- Analyse ingredients and nutrition information from packaged food.
- Use AI to make unfamiliar label language easier to understand.
- Help users make more informed choices without replacing expert judgment.

HOW IT WORKS

A local AI workflow connects image, product data, and results

- User provides a label photo or food-label information.
- Ollama runs qwen2.5vl:3b to interpret the image and text.
- React + Vite provide the interface; Python + Flask handle requests.
- Open Food Facts adds product context when available; SQLite stores local records and saved analyses according to the project setup.

IMPORTANT LIMIT

The app supports understanding — not absolute food -safety verdicts

Interpret

- Useful for interpreting ingredients, nutrition information, and product details.

Stay local

- Local processing may help keep image analysis on-device or within the local setup, depending on configuration.

Verify important decisions

- AI can misread labels or misunderstand ingredients, so important decisions should be checked against the original label or qualified advice.

NUTRITION LABEL · ILLUSTRATIVE

Nutrient	Illustrative amount
Calories	240 kcal
Protein	12 g
Total fat	9 g
Total carbohydrate	28 g
Dietary fibre	4 g
Total sugars	6 g
Sodium	380 mg

Illustrative amounts for a sample package only — not real product data.
